

## **AMENDMENTS TO THE SPECIFICATION:**

Title: On page 1 replace the title to read in full as follows:

### **METHOD FOR PREVENTING LOADING AND EXECUTION OF ROGUE OPERATING SYSTEMS IN A LOGICAL PARTITIONED DATA PROCESSING SYSTEM**

Summary of the Invention: On page 5 replace the summary of the invention paragraph to read in full as follows:

The present invention provides a method for managing operating systems. A request from an operating system is received in the logical partitioned data processing system to register for access to hardware in the logical partitioned data processing system. The request includes a key code for the operating system. A determination is made as to whether the operating system is an authorized operating system using the key code in response to receiving the request. The operating system is registered if the operating system is the authorized operating system. Otherwise, the operating system is terminated.
